JUMPING PRO SUITE VOLA

THE GLOBAL SOLUTION FOR THE MANAGEMENT OF YOUR EQUESTRIAN EVENT

BY VOLA-RACING.CH
Presentation of projects

Introduction

In May 2015, the site "Elements Resort" located in Samorin in Slovakia called on the company Vola Racing.ch to provide and install the complete suite of Jumping-Pro software. This suite consists of several software having complementary features. It manages the competitors, the start lists, the timing, live timing, the video inlays as well as the publication of the results to the FEI. After a few days of installation and training by the staff members of Vola Racing.ch, the timing team and the show office of the site were autonomous and able to manage national or international competitions.

The Hippo Arena and the equestrian competitions

Inaugurated in 2014, the Hippo Arena of Samorin is the biggest equestrian complex of Eastern Europe. Its ambition is to organize the most prestigious international equestrian events. Sports enthusiasts can look forward to show jumping, endurance races, horse races, and dressage.
Technology and services

Timing and results

The Jumping - Pro software allows you to make the organization of an equestrian competition from A to Z, in other words, from the list of the committed until the publication of the results. Of course, the software integrates many different professional and certified timing devices such as Tag Heuer or Alge Timing.

Video

In addition to an accurate timekeeping, the organizer wishes to publish live information such as the competitor on course with net time on diverse media supports. Jumping-pro Suite allows, thanks to the auxiliary modules Display, Live and video, to broadcast all the data of the competition on a TV network, on the Internet or on a video giant screen. The person in charge can choose to show the data of the competitors and the timing data as well as the start lists and the provisional ranking.
**LED video giant screens**

Besides the software, Vola Racing.ch offers a range of LED modules such as presented below. This installation has been made in the framework of a project with the Royal Moroccan Equestrian Sports Federation.

**Displays**

To lead the event, the speaker needs the timing information as well as the penalties given by the judges. The software generates these data and the module “Display” can broadcast them live on a TV screen. It is also particularly ideal for the paddock where the competitors can follow the updated start list.
**Training on the software**

Of course, such a technology is not assimilated in a few minutes. Staff members of the company Vola are available to guide and advise the organizer for the first steps. Today Elements Resort and the Royal Moroccan Equestrian Sports Federation work in an autonomous way with this system.

**Recommendation**

“**In the goal to manage ourselves the timing, the data processing and the show office administration of our numerous equestrian competitions, we have contacted the company Vola. This company provided us with a great software technology allowing us to run 3 competitions simultaneously! Thanks to Vola we have in hand a modern and user-friendly solution which was quickly assimilated by the members of our staff. We have also appreciated the technical support, the reactivity to our modifications requests and the personal contact with the Vola technicians.**”

Lukas Lukacovic (Head of IT department Elements Resort Samorin)
Collaboration

By the quality of its solutions and by its flexibility, the team Vola maintains very good relations with its clients and accompanies them towards the success.
